VIEWING PICTURES

Windows:
1. Insert the diskette.
2. From the Program Manager, select File, then select Run.
*3. Type A:\SETUP.EXE and click OK.
4. Double-click the **PC PictureShow™** icon in the Konica group.

Macintosh:
1. Insert the diskette.
2. Double-click the **PC PictureShow™** disk icon.
3. Double-click the **PC PictureShow™** icon in the Konica folder.
4. The menu bar will appear when the cursor is moved to the top of the screen.

DOS:
1. Insert the diskette.
2. From the A:\ prompt, type HIRES or LORES.
3. To pause the show, press the Pause key.
4. To continue or exit, press the Esc key.

*(A: refers to your diskette drive letter. Substitute your actual drive letter if different.)

NAVIGATING

In Full Screen mode (not in Picture Index), clicking on the Arrow icons will advance one picture, left for previous, right for next.

PICTURE INDEX

The Picture Index is displayed when you first run **PC PictureShow**™. Pictures on the disk are shown in thumbnail size and can be rotated by selecting Rotate from the menu bar. To rotate, place a frame around a picture by clicking once on it and then click on Rotate, followed by Clockwise or Counter-Clockwise. To view a picture in Full Screen mode and exit from the Picture Index, double-click on a picture.

AUTOMATIC PC PICTURESHOW™

Start the Automatic **PC PictureShow**™ by clicking the Show icon. Pictures will be displayed sequentially, one after another. To stop the Automatic **PC PictureShow**™, click the Show icon again or press the Esc key.

COPY TO CLIPBOARD

An entire picture or part of a picture can be copied to the system clipboard. Once on the clipboard (in memory) you can exit or switch from **PC PictureShow**™ and use the Edit/Paste function in other programs (word processing, paintbrush, spreadsheets) to import the selected picture.

NOTES

Clicking on the Notes icon will toggle the notes text box on or off. These notes will be saved (see Exit) for each picture. The size of the box can be changed by placing the cursor at the side or corner of the box until you see the double arrow cursor, then holding the left mouse button and dragging the side to where you want it and releasing the button.

ROTATE

Clicking on this icon in the Full Screen mode will cause the picture to rotate 90 degrees (one quarter turn) clockwise for correct viewing of portrait-style pictures. Each subsequent click will rotate the image another 90 degrees.

REMOVE

Clicking on the Remove icon will remove a picture from the **PC PictureShow**™. A warning screen will appear explaining that once removed, the picture can only be retrieved by using **PC PictureMaster**™ (coming soon).

ZOOM

You can Zoom In to expand the picture to fill the screen while in Full Screen mode by pressing the + key on your keyboard or clicking on the + icon. You can Zoom Out to return the picture to actual viewing size by pressing the – key on your keyboard or clicking on the – icon.

HELP

Anytime you need help while running **PC PictureShow**™, click on the Help icon. Further help is available in each topic highlighted with green or underlined. Clicking on a green highlighted topic will proceed to a detailed help screen. Clicking on an underlined topic will show a pop-up description for that topic.

PRINT (Macintosh Only)

This icon will send the current picture to an attached printer and is only available for Macintosh. To print pictures in Windows you can export them to another program and print from there.

EXPORT

Clicking on the Export icon will show a menu with several options for format and quality. The format options are Bitmap which is useable by most Windows and MAC programs, or JFIF which is a common format used for image transmission for many on-line services. There are several quality/size options. Increasing colors will improve quality and increase file size.

EXIT

To exit from **PC PictureShow**™, click on the Exit icon. An exit screen will prompt you to save any changes (text, removes, or rotates) if any were made, and give you the option of not displaying the start-up logo or not going to the Picture Index on starting the program (it will go immediately to the first picture instead).

WHAT IS PC PICTURESHOW™

PC PictureShow™ is a picture viewing utility that displays your pictures all at once in the Picture Index, or in an automatic PC PictureShow™ one after another. Pictures can have comments or notes added to each picture or be rotated for viewing in the correct orientation. PC PictureShow™ also allows you to convert and export the pictures into standard bitmap (BMP) image format for use in other programs such as word processors, paintbrush, or image enhancement software, or into JFIF image format for transmission over on-line services such as the Internet. You can advance through the pictures forwards and backwards, add text notes, and copy pictures to the clipboard. Pictures can also be removed from PC PictureShow™ or zoomed to fill the screen.

The entire PC PictureShow™ program is contained on the diskette with your pictures. The program can be run from the diskette or can be copied to and run from a hard disk drive if desired. To run the PC PictureShow™ from your hard drive, copy all files from the diskette to a directory on the hard drive. From File Manager, double-click on the SETUP.EXE file (new icon will be added). Click on the new icon to execute that particular PC PictureShow™.

Konica PC PictureShow™

We hope you enjoy your **PC PictureShow**™.
